An ideal AC Hipot Tester with low cost of ownership realized, built on more than 50 years of experience in market

NEW

Hipot (Withstanding Voltage) Tester

AC Hipot Tester TOS5200

Highly-stable output with PWM Amp System 5 kV/100 mA (500 VA) AC Hipot test Short-circuit current 200 mA or more Rise time/Fall time control Equipped with RS232C and USB Interface

An ideal AC Hipot Tester with ownership realized, built on 50 years of experience!

Rise/Fall Time control function of the applied voltage

Equipped with a Rise time/ Fall time control function

Prevents from an excessive stress applied to the EUT or for standard tests.

Pursuing usability and safety

All new smart design of control panel and output terminals!

Eliminates the projected components of output terminals, and equips with a new type of the LOW terminal. Pursuing the improvement of safety and a convenience in production line, such as providing the protection cover for the front panel.

▲ Output terminal Left: HIGH (red) Right: LOW (black, with lock function)

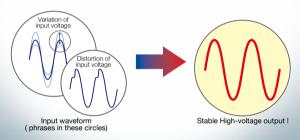

▲ View with the protection cover removed from front panel

Highly stable output

Newly developed, high-efficiency PWM switching amplifier!

Providing a stable output of high voltage without being affected by AC line variation. Ensure the user to perform highly reliable testing with confidence, even in regions with large voltage variations. (Input voltage fluctuation rate: ±0.3 %)

Reducing the tact time

Increasing the productivity!

Capable of setting the test time from 0.1 s

low cost of more than

More than 50 years of experience to support "JAPAN-quality"

Our electronic safety tester has more than 50 years of history since the first product was released in 60's.

High Precision High Resolution

± 1.5 % of reading*

High-precision measurement $\pm 1.5 \%$ of reading *(with voltmeter 500 V or higher, Ammeter 1 mA or higher)

MEMORY 1 2 3 RECALL STOP RESET POWER O 1

Supporting the World-wide input voltage

Universal usability!

Usable in any country without changing the input power supply.

Selectable output frequency!

Not rely on the input power environment. It supplies the stable test voltage with 50/60 Hz frequencies.

▲ Rear panel

AC Hipot Tester **TOS5200** NEW

TOS5200 is designed for AC Hipot Test with 500 VA capacity and 200 mA short circuit current output capability. Equipped with the PWM amplifier, the TOS5200 can provide a stable & reliable output without being affected by AC power line. Therefore, it is a perfect solution for electronic equipment or devices complied to IEC, EN, UL, VDE and JIS etc. requirement. As TOS5200 covers most of features of our upper class model for AC Hipot Test, it achieves the superb cost / performance ratio for those who need 200 VA or 500 VA capacity, or both. Also, as it equips the Interlock function together with other safety features, operator can carry out the test with higher current value in safe.

The TOS5200 has many improvements from the predecessor!

Comparison with the Kikusui previous model

Specification	n comparison item	TOS5200	TOS5050A		
	Output method	PWM switching amp system	Slide transformer method		
	Distortion	3 % or less	As per commercial power supply waveform

Highly stable output is realized with PWM Switching Amplifier!

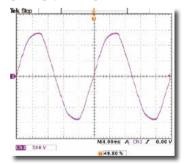

Equipped with the PWM switching amplifier system, the TOS5200 realizes highly stable output without influenced by input form AC line.

A conventional Hipot Tester boosts and outputs the AC line's input voltage through the use of a slide transformer system With this slide transformer system, input voltage fluctuations will affect the output, preventing test from being performed properly. Since the TOS5200 equips with a high-efficient PWM amplifier that can output a stable high-voltage without being affected by the variation of AC power line, users can perform "safe", "stable", and highly "reliable" tests with confidence, even in regions with large voltage variations.

The output waveform is essential factor in Hipot (Withstanding oltage) testing!

▲ AC output waveform of the slide transformer system

High-Accuracy = Less measurement error! "+/-1.5 % of reading" versus "+/-1.5 % f.s."

TOS5200 reading: Accuracy is specified against reading value.

TOS5050A ▶ f.s: Accuracy is specified against full scale.

When using TOS5200 at 1500 V output measurement, the max error would be 1500 V(reading value) x 1.5 % = 22.5 V On the other hand, when using equipment which specifies its accuracy with "+/- 1.5 % f.s.",

the max error would be 0500 V(reading value) $\times 1.5 \%$ ($\times 0.75 \%$) $\times 1.5 \%$ ($\times 0.75 \%$) $\times 1.5 \%$

the max error could be 2500 V(max voltage) x 1.5 % =37.5 V (it needs to set the range 0 to 2.5 kV)

So, there is 15 V difference of max measurement error at 1500 V output.

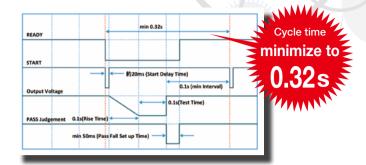

Capable of Test Time setting from 0.1s, which enables to reduce the tact time!

TOS5200 can set the test time from 0.1 sec without sacrificing measurement accuracy.

This makes test time 5 times faster compared to the TOS5050A (max test time:0.5sec) and it leads to reduce the tact time.

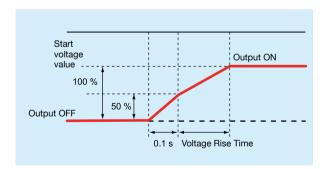

Reduction of the tact time leads to improve the productivity, so it has been an issue that reducing the tact time may cause to worsen the measurement accuracy when the test time is faster than measurement respond speed.

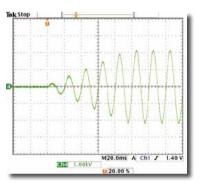

Rise time / Fall time control function

The rise time control function is to prevent the excessive stress that is being applied to the EUT (test object). The Hipot (Withstanding voltage) test is conducted to verify the safety performance of the EUT and which test voltage for Hipot (Withstanding voltage) test is applied approximately five to ten times greater than the voltage that handles by the EUT. If a high voltage is applied rapidly with no rise time, the transitional large voltage (current) will be occurred, and it may cause a damage to the EUT. For this reason, safety standards stipulate the procedure of Hipot (Withstanding voltage) test, and the test voltage must be gradually increased to the specified voltage when the test is performed. The rise time control function adopted in the in the TOS5300 Series can set the voltage rise time from 0.1s to 10.0 s (at a resolution of 0.1 s) and also it is capable to set the 50 % (fixed) of the applied test voltage. In addition, the fall time control function enables to decrease the test voltage gradually after the completion of a PASS judgement. The voltage fall time is fixed at 0.1 s (OFF is also selectable).

▲Start voltage can be set at 50 % of the test voltage

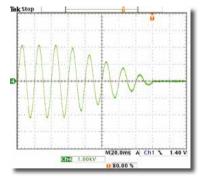

Rise Time control function

▲Rise time control waveform (example)

The Rise time control function enables you to increases the test voltage gradually to reach the setting voltage while the AC Hipot (Withstanding voltage) test is conducted. The voltage rise time can be set from 0.1 s to 10.0 s at a resolution of 0.1s.

Fall Time control function

▲Fall time control waveform (example)

The Fall time control function enables you to decrease the test voltage gradually when the PASS judgment is made at the AC Hipot (Withstanding voltage) test. The voltage fall time is fixed at 0.1 s. (OFF is also selectable).

Improved the setting resolution of the leak current by 0.01 mA!

TOS5200 is can set the current limit from 0.01 mA to 110 mA. (TOS5050A: 0.1 mA to 110 mA)

- Enable to clarify the actual value of device under test (DUT)
- The setting resolution of the lower limit setting has been improved from the previous model ,it enables to defect the failure more accurately.

■ Specifications

■ Withstanding voltage tester

Unless specified otherwise, the specifications are for the following settings and conditions.

•The warm-up time is 30 minutes.

•TYP: These are typical values. These values do not guarantee the performance of the product.

•rdng: Indicates the readout value.

• set: Indicates a setting.

	Output range		0.00 KV to	5.00 kV						
		Accuracy	± (2 % of set + 20 V) when no load is connected							
		Operating range	0.00 kV to	5.50 kV

Hipot (Withstanding Voltage) Tester TOS5200

■ Specifications

*1. Regarding the output time limits:

Taking size, weight, and cost into consideration, the heat dissipation capability of the voltage generator that is used for withstanding voltage tests has been designed to be one half that of the rated output. Use the TOS5300 Series within the following limits. If you use the product in a manner that exceeds these limits, the output section may overheat, and the internal protection circuits may be activated. If this happens, stop testing, and wait until the TOS5300 Series returns to its normal temperature.

Ambient temperature		Pause time	Output time
t ≤ 40 °C	50 mA < i ≤ 110 mA	Greater than or equal to the output time	30 min. max.
	i ≤ 50 mA	Not necessary	Continuous output possible

(Output time = voltage rise time + test time + voltage fall time)

*2. Regarding the test voltage waveform:

Waveform distortions may occur if an DUT whose capacitance is dependent on voltage (for example, an DUT that consists of ceramic capacitors) is connected as the load. However, if the test voltage is 1.5 kV, the effect of a capacitance of 1000 pF or less can be ignored. Because the product's high-voltage power supply uses the PWM switching method, if the test voltage is 500 V or less, the switching and spike noise proportions are large. The lower the test voltage, the greater the waveform is distorted.

- *3. For both True rms and Mean-value response, 50 ms or above response time is required to satisfy the measurement accuracy.
- *4. Regarding ammeter and judgment accuracy:

During AC withstanding voltage tests, current also flows in the stray capacitance of items such as the measurement leads and jigs. This current that flows in the stray capacitances is added to the current that flows in the DUT, and the sum of these currents is measured. Especially if you want to perform judgments with high sensitivity and accuracy, it is necessary to consider methods to limit the current that flows in these stray capacitances, such as by adding upper and lower limits.

Output voltage	1 kV	2 kV	5 kV
When using 350 mm long test leads that are suspended in air (TYP)	2 μΑ	4 μΑ	10 μΑ
When using the accessory, high test lead TL31-TOS (TYP)	16 μΑ	32 µA	80 μΑ

In case of 70 % humidity or higher, it is considerable to add 50 μA on the Limit value.

Other features / Interfaces

Test mode					
Double act	ion feature	Tests can only be started by pressing and releasing STOP and then pressing START within 0.5 seconds of releasing the STOP switch.			
Length of tin	ne to maintain a PASS judgment result	You can set the length of time to maintain a PASS judgment: 50 ms, 100 ms, 200 ms, 1 s, 2 s,5 s, or HOLD.			
Momentary	/ feature	Tests are only executed while the START switch is held down.			
Fail mode f	feature	This feature enables you to prevent remotely transmitted stop signals from clearing FAIL judgments and PROTECTION modes.			
Timer featu	ire	This feature finishes tests when the specified time elapses. If output voltage exceeds "setting + 350 V" or is lower than "setting - 350 V," the TOS5200 switches to PROTECTION mode, output is turned off, and testing finishes.			
Output volt	tage monitor feature				
Memory		Up to three sets of test conditions can be saved to memory.			
Key lock		Locks panel key operations (settings and changes).			
Protective features		Under any of the following conditions, the TOS5200 switches to the PROTECTION state, immediately turns output off, and stops testing. A message is displayed on the screen.			
Interlock P	rotection	An interlock signal has been detected.			
Power Sup	ply Protection	An error was detected in the power supply.			
Volt Error F	Protection	While monitoring the output voltage, a voltage outside of the rated limits was detected. AC or DC withstanding voltage tests: ±350 V			
Over Load	Protection	During a withstanding voltage test, a value that is greater than or equal to the output limit power was specified. AC withstanding voltage test: 550 VA.			
Over Heat	Protection	The internal temperature of the TOS5200 became too high.			
Over Rating	g Protection	During a withstanding voltage test, the output current was generated for a length of time that exceeds the regulated time			
Remote Pro	otection	A connection to or disconnection from the front-panel REMOTE connector was detected.			
SIGNAL I/O) Protection	The rear-panel SIGNAL I/O connector's ENABLE signal has changed.			
USB Protect	ction	The USB connector has been disconnected while the TOS5200 was being controlled through the USB interface.			
	USB	USB Specification 2.0			
Late Const.	RS-232C *1	D-SUB 9-pin connector on the rear panel (compliant with EIA-232-D) All functions other than the POWER switch and KEY-LOCK			
Interfaces	REMOTE	Front-panel 9-pin MINI DIN connector. By connecting an optional device to this connector, you can control the starting and stopping of tests remotely.			
	SIGNAL I/O	Rear-panel D-sub 25-pin connector			

^{*1. &}quot;Talk mode" can be set, when RS232-C is used as comunication interface.

Talk mode	Description				
0	It responds only for commands from PC. (Default setting)				
	It responds automatically for start and end test, and returns the status, setting value, measured value.				
	Response at start		<start></start>		
ı	Response at	Status	<pass>, <u_fail>, <l_fail>, <prot>, <about></about></prot></l_fail></u_fail></pass>		
	end of test	Setting value, Measured value	Test No., Programme No., Test mode, Measured voltage, Measured current, Test time		

Specifications

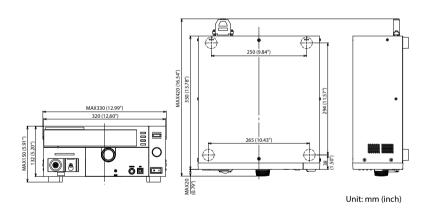

General

Display			LCD: LED back custom indicators			
Installation location		ocation	Indoors, at a height of up to 2000 m

		nge temperature/humidity	0 °C to 40 °C (32 °F to 104 °F)/20 %rh to 80 %rh (no condensation)			
		e temperature/humidity	-20 °C to 70 °C (-4 °F to 158 °F)/90 %rh or less (no condensation)			
Nominal vol		tage range (allowable voltage range)	100 VAC to 240 VAC (90 VAC to 250 VAC)			
Power	Power Power	When no load is connected (READY)	100 VA or less			
supply	consumptio	When rated load isconnected	800 VA max.			
	Allowable fre	quency range	47 Hz to 63 Hz			
Insulation	n resistance (b	etween AC LINE and the chassis)	30 MΩ or more (500 VDC)			
Withstan	ding voltage (b	petween AC LINE and the chassis)	1500 VAC, one minute			
Earth co	ntinuity		25 AAC, 0.1 Ω or less			
Electromagnetic compatibility (EMC) *1		atibility (EMC) *1	Complies with the requirements of the following directive and standard. EMC Directive 2004/108/EC, EN 61326-1(ClassA *2), EN 55011(ClassA *2, Group1 *3), EN 61000-3-2, EN 61000-3-3 Applicable under the following conditions The maximum length of all cabling and wiring connected to the TOS5200 must be less than 2.5 m. The shielded cable is being used when using the SIGNAL I/O. The high test lead TL31-TOS			
Safety *1			Complies with the requirements of the following directive and standard. Low Voltage Directive 2006/95/EC, EN 61010-1ed3 (Class I *4 Pollution degree 2)			
Dimensions (mm(inches))(maximum)		s))(maximum)	320 (12.6") (330(12.99")) W × 132(5.2") (150(5.91")) H × 350(13.78") (420(16.54")) D			
Weight			Approx. 14 kg (30.9 lbs)			
Accessories			Power cord: 1pc. / High test lead (TL31-TOS): 1set (1 red wire and 1 black wire, each with alligator clips); 1.5 m / D-sub 25-pin plug: 1set; assembly type / High-voltage warning sticker: 1pc. / Setup Guide / Quick Reference(1 each for English and Japanese) / Safety information / CD-R *5			

^{*1} Only on models that have the CE marking on the panel. Although signals are insulated with output terminals, each signal is common. Logic setting is also possible.

*5 Contains the User's Manual, the Cimmunication Interface Manual, VISA library (KI-VISA), IVI-COM driver, and Safety evaluation test.

Outline drawing

TU01-TOS Option(s) for Electrical Safety Testers

The TU01-TOS is a terminal unit that converts the 25 pin SIGNAL I/O connector of the Kikusui TOS5200 Withstanding Voltage Tester to the 14 pin SIGNAL I/O connector of the TOS5050A/ 5051A. You can insert this unit between a controller and a TOS5200 to perform the same external control that you can perform on the TOS5050A/5051A.
