

Versatility and Reliability meet High-Performance

Meinberg's microSync^{RX} is a versatile and feature-rich synchronization device that offers a high level of efficiency and flexibility. This innovative, multipurpose synchronization solution provides a variety of outstanding features within a 19 inch rack-mount case design.

Key features include four Gigabit Ethernet interfaces, multiple programmable output signals and several configurational options like Programmable Pulses (TTL), 10 MHz, 10 MHz sine, Time Code AM (IRIG, AFNOR) and Frequency Synthesizer (0.1 Hz to 10 MHz).

The microSync^{RX} is not only suitable as a high-performance NTP server, it can also be used as a PTP grandmaster in a large variety of industry applications thanks to our meinbergOS firmware, supporting most PTP profiles. It can be managed using the [Meinberg Device Manager](#) software which is available for Windows and Linux platforms.

In addition to the selection of preconfigured inputs and outputs, each series offers the option of choosing between different GNSS receivers, oscillators, an additional OLED display with rotary knob and redundant AC and/or DC power supplies.

Product Highlights

- | Powerful IEEE 1588 / PTP Time Server
- | High-Performance (S)NTP Server
- | Different Oscillator Options for Advanced Holdover Performance
- | Optional OLED Display with Rotary Knob
- | Redundant Power Supply Configurations
- | Meinberg Device Manager for Configuration and Status Monitoring
- | Three-year Manufacturer's Warranty
- | Unlimited Technical Support Including Firmware Updates

Examples

microSync RX101SQ/AD10

- IO's / Configuration: 10 series (no display) as described starting on page 3
- Receiver: Meinberg GPS, 12-Channel
- Oscillator: OCXO SQ Oscillator
- Power Supply: AD10

microSync RX400DHQ/AD10-DC20

- IO's / Configuration: 40 series (with display) as described starting on page 7
- Receiver: L1 Multi-GNSS, 72-Channel
- Oscillator: OCXO DHQ Oscillator
- Power Supplies: AD10 & DC20 (Redundancy)

microSync RX 302HQ/AD10-AD10

- IO's / Configuration: 30 series (no display) as described starting on page 7
- Receiver: Meinberg Multi-GNSS, 72-Channel
- Oscillator: OCXO HQ Oscillator
- Power Supplies: 2x AD10 (Redundancy)

Scope of Delivery

QUANTITY	ITEM
1x	microSync ^{RX} (incl. Mounting Brackets ¹)
1x	Antenna, L1 Multi-GNSS or Meinberg GPS/GNS-UC ²
1x	Antenna Cable, 20 m (65.62 ft), SMA or BNC connector ²
1x	Antenna Mounting Kit ²
2x	16 pin DMC Female Connector

¹ In order to withstand the environmental tests for vibration, shock and seismic, special mounting brackets are optionally available

² Depending on configuration

Optional Expansions – SFP Modules

Recommended and tested transceivers from other vendors which are available at additional costs.

RJ-45 (TRIPLE SPEED 10/100/1000 BASE-T)	SINGLE MODE (1000BASE-LX, 10KM, LC SFP, 1310 NM)	MULTI MODE (1000BASE-SX, LC SFP, 850 NM)
AVAGO ABCU-5740RZ	AVAGO AFCT-5710PZ	AVAGO AFBR-5710PZ
FINISAR FCLF8521P2BTL	FINISAR FTLF1318P3BTL	FINISAR FTLF8524P3BNL

Management

User Management

The user management allows to create, manage and delete individual users. Thereby, each user can be given, or withdrawn individual write and read access for all configuration options, as well as read-only rights for status displays. Furthermore, users can be deactivated or added for a limited time. Password changes are also possible, as well as the option of periodically prompting the user to renew its password.

In addition, there are three available predefined role templates (admin, info, status) included that offer the user a preselection of access levels. Based on this, individual rights can be added or deleted. Moreover, management protocols like SNMP, Shell or mbgdevman can be enabled for each user account to limit access to the device.

Firmware Management

The integrated firmware management of meinbergOS allows to install multiple firmware versions in parallel and choose which one to run. All integrated components and modules (e.g. the GPS receiver part) can be updated with the latest firmware if required.

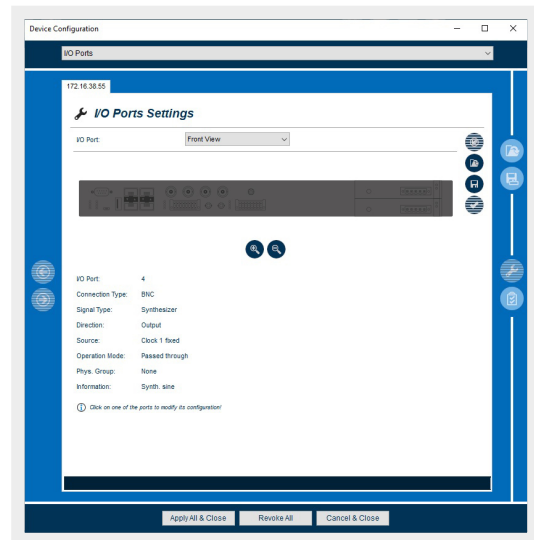

Meinberg Device Manager

The Meinberg Device Manager utility is a graphical desktop application that allows to configure Meinberg Devices over an encrypted network connection or a local USB or serial connection. A great advantage of the Meinberg Device Manager is that various devices can be configured and monitored simultaneously.

The Meinberg Device Manager for Windows can be used under Windows 7 and all newer versions. Supported Linux distributions include Ubuntu, Mint Linux, Debian, SUSE Linux, CentOS, and others.

The software is delivered on the USB stick included in the scope of delivery and does not have to be installed or copied on the PC. The Meinberg Device Manager can be started directly from the USB data carrier. The computer must be connected to the network in which the microSync system is connected.

Otherwise the software is available for download on our website:
www.meinbergglobal.com/english/sw/mbg-devman.htm

Meinberg Device Manager - Configuration Interface

Self-Diagnosis

The system continuously carries out background checks of various parameters such as system resources, port and receiver states. The user is notified when an incident occurs.

Jamming and Spoofing Detection

Our GNSS receivers GNS181 and GNS181-UC are able to receive multiple GNSS constellations in parallel. The GNS181-UC can receive GPS and Galileo signals whereas the GNS181 can additionally receive GLONASS and Beidou signals. These receiver types have implemented Jamming and Spoofing Detection technologies.

Anti-Jamming Technology

The detection of jamming attacks are based on active CW (continuous wave) interference detection and an on-board SAW band pass filter. In case a jamming event occurs where the GNSS satellites cannot be received anymore, the microSync will switch either seamlessly to the next available source in its priority list (e.g. IRIG-B or PTP) or falls back to its internal high quality OCXO which is available at different grades.

Anti-Spoofing Technology

Spoofing is a process whereby a malicious third party tries to control the reported position via a “fake” GNSS broadcast signal. This may result in the form of reporting incorrect position, velocity or time.

To combat against this, the receiver module includes spoofing detection measures to alert the system when signals appear to be suspicious.

The receiver combines a number of checks on the received signals looking for inconsistencies across several parameters. The spoofing detection feature monitors suspicious changes in the GNSS signal indicating external manipulation. The detection is successful when the signal is genuine first and when a transition to the spoofed signal is being observed. The algorithms rely on availability of signals from multiple GNSS constellations.

In case a spoofing attack is detected, the microSync system is notified by the receiver. The microSync system is then in a position to either switch to a different source or run on internal OCXO (available in firmware 2020.08.0 or higher).

Multiple Reference Sources

The microSync system is able to handle input signals of Multiple Reference Sources (MRS) simultaneously.

The following input signals can be used in a user-configurable order:

- | GNSS
- | IRIG-B
- | Serial Time String + PPS
- | PTP
- | PPS (depending on model)
- | 10 MHz (depending on model)
- | NTP (firmware v.2020.08.0 and higher)

In case the signal which has the highest priority is lost, the system will switch to the next available source.

Intelligent Reference Selection Algorithm

In case that a master signal fails the Intelligent Reference Selection Algorithm (IRSA) takes care that the switching to the next reference signal in the priority list runs automatically and smoothly.

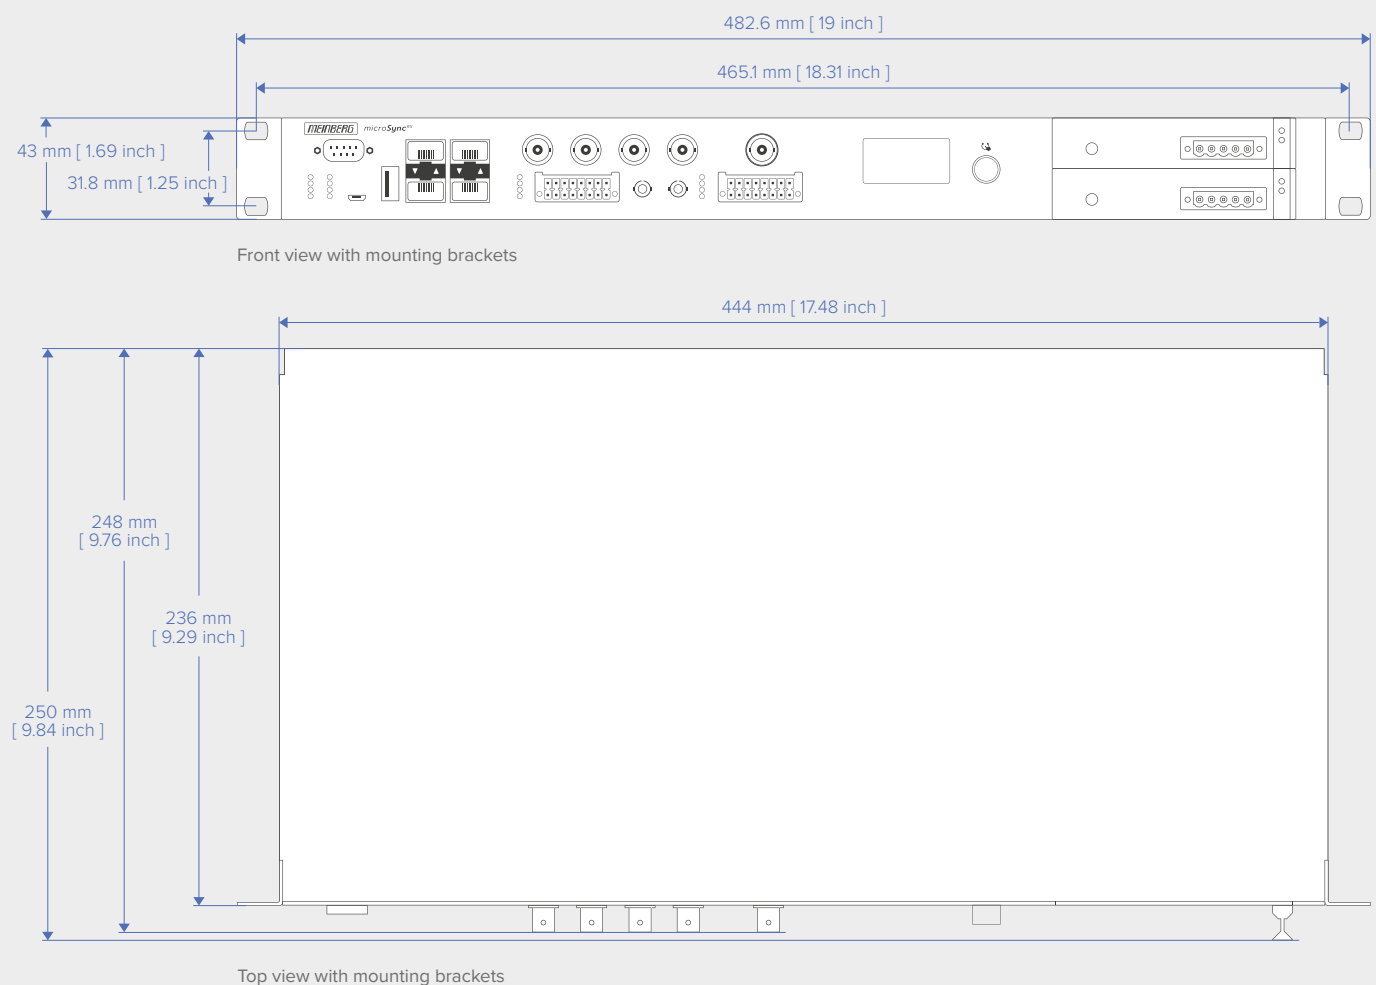

If the next selectable source has an offset that is $<10\ \mu\text{s}$ compared to the previous one the system will slowly adjust to this offset without causing a phase jump. If the offset is larger than $10\ \mu\text{s}$, the system will set the time immediately.

In the event that the original source comes back, the system will again use that source for synchronization.

The IRSA also takes the highly stable holdover performance of the local oscillator into account. It ensures that switching from the superior reference signal to the less accurate one is delayed as long as the highly stable oscillator can provide better accuracy in holdover than the next available reference signal in the priority list.

Technical Specifications

Physical Dimensions

Mechanical Data

Housing Type	19" (Full-Rack), 1U
Housing Material	Steel
Weight (incl. Mounting Brackets)	approx. 3.7 kg (8.16 lbs), depending on built in Power Supplies

Environmental Requirements

Recommendations for continuous operation.

Operating Temperature Range	–20 to 55 °C (–4 to 131 °F)
Storage Temperature Range	–30 to 70 °C (–22 to 158 °F)
Relative Humidity	5 to 95 % (non-condensing) at 40 °C (104 °F)
Operating Altitude	up to 4,000 m (13,123 ft) above sea level
Atmospheric Pressure	615 to 1600 hPa

Type Tests

Safety Tests

IEC 62368-1 Safety Requirements	Overvoltage Category	II
	Protection Class	1
	Degree of Pollution	2
IEC 60529	Protection Rating / IP Code	IP30

Environmental Tests

The tests were performed according to IEC 61850-3 referring to the following standards:

IEC 60068-2-1	Cold	–25 °C (–13 °F), 96 h –40 °C (–40 °F), 16 h
IEC 60068-2-2	Dry heat	60 °C (140 °F), 96 h 85 °C (185 °F), 16 h
IEC 60068-2-14	Change of temperature	–20 to 55 °C (–4 to 131 °F), 5 cycles, 1 °C (34 °F)/min
IEC 60068-2-30	Damp heat, cyclic (12 h + 12 h)	55 °C (131 °F), 97 % RH, 6 cycles
IEC 60068-2-78	Damp heat, steady state	40 °C (104 °F), 93 % RH, 240 h
IEC 60255-21-1	Vibration (sinusoidal) ¹ Class 2	10–150 Hz, 1 g _n , 2 sweeps, 3 axes 10–150 Hz, 2 g _n , 40 sweeps, 3 axes
IEC 60255-21-2	Shock ¹ Class 2	10 g _n , 11 ms, ±3 shocks, 3 axes 30 g _n , 11 ms, ±3 shocks, 3 axes 20 g _n , 16 ms, ±1000 shocks, 3 axes
IEC 60255-21-3	Seismic ^{1,2} Class 2	4–35 Hz, 1 g _n , 1 sweep, hor. axes 4–35 Hz, 2 g _n , 1 sweep, ver. axis

¹ In order to withstand the tests for vibration, shock and seismic, special mounting brackets are optionally available.

² The frequency range deviates from the values required by the standard. In this test, a frequency range of 4–35 Hz instead of 1–35 Hz was used.

Electromagnetic Compatibility – Emission

CISPR 16-1-2 and CISPR 16-2-1	Conducted disturbance voltage measurements
CISPR 16-2-3	Radiated radio disturbance
CISPR 32	Conducted disturbance current measurements
FCC 47 CFR Part 15 section 15.107 (b) [3] RSS-Gen Issue 4 section 8.8 [4]	Conducted emission
FCC 47 CFR Part 15 section 15.109 (b) [3] RSS-Gen Issue 4 section 8.9 [4]	Radiated emission
ETSI EN 303 413	Standard for GNSS receiver

Electromagnetic Compatibility – Immunity

The tests were performed according to IEC 61000-6-5 and IEC 61850-3 referring to the following standards:

IEC 61000-4-2	Immunity test to electrostatic discharges	±6 kV contact discharge ±8 kV air discharge
IEC 61000-4-3	Immunity test to radiated, radio-frequency, electromagnetic fields	10 V/m
IEC 61000-4-4	Immunity test to electrical fast transients (Burst)	±4 kV, 100 kHz
IEC 61000-4-5	Immunity test to surges	up to ±2 kV line to line up to ±4 kV line to earth
IEC 61000-4-6	Immunity test to conducted disturbances, induced by radio-frequency fields	10 V
IEC 61000-4-8	Immunity test to power frequency magnetic fields	100 A/m continuous 1000 A/m at 1 s
IEC 61000-4-11	Immunity tests to voltage dips, short interruptions and voltage variations	ΔU 30 % for 1 period ΔU 60 % for 50 periods ΔU 100 % for 5 periods ΔU 100 % for 50 periods
IEC 61000-4-16	Immunity test to conducted, common mode disturbances	30 V continuous 300 V at 1 s
IEC 61000-4-17	Immunity test to ripple on d.c. input power ports	10 % of U_N
IEC 61000-4-18	Immunity test to damped oscillatory waves	±1 kV line to line ±2.5 kV line to earth
IEC 61000-4-29	Immunity test to voltage dips, short interruptions and voltage variations	ΔU 30 % for 100 ms ΔU 60 % for 100 ms ΔU 100 % for 50 ms
